EXPLORATION OF SECTORAL EGO THROUGH ORGANIZATIONAL COMMUNICATION APPROACH

Performance of the Indonesia One Data (SDI) Forum in Integrating Digital Human Resource Development Data

INTRODUCTION

Backgorund

Development success is highly dependent on effective data management. Data integration within the Indonesia One Data (SDI) Forum remains constrained by sectoral ego [1], [2], [3], despite ongoing communication and coordination efforts. In 2024, fewer than 50% of local governments had integrated their data into the national system, indicating limited performance outcomes [4].

This condition highlights the need for more strategic organizational communication planning [5], to identify key communication factors that can reduce sectoral ego and improve the performance of the SDI Forum.

Sectoral Ego Indicators

Sectoral ego refers to the tendency of organizations or sectors to prioritize their own interests often at the collective goals. The indicators of Sectoral ego are **Arrogance, Conflict, Non-Compliance, Conflict of interest, Unfair Competition, Abuse of authority, and Distrust [6]**.

Research Question

1. Which communication factors are most relevant for reducing coordination barriers in the SDI Forum?
2. To what extent do communication factors contribute to reducing sectoral ego and improving the performance of the SDI Forum?
3. Who are the key communication actors in the SDI Forum communication network?

OBJECTIVE

Propose a Communication Model for cross-sectoral government in data integration by analyzing communication network, determining factor, and effect analysing.

RESEARCH HYPOTHESIS

Figure 1. *The Influence of the CommonKADS Communication Model on the organizations performance obstacled by Sectoral Ego*

A communication model can be developed based on elements of the CommonKADS communication model. The organizational communication factors within the CommonKADS framework can reduce sectoral egos, thereby improving organizational performance.

MATERIALS & METHODS

Theoritical Framework

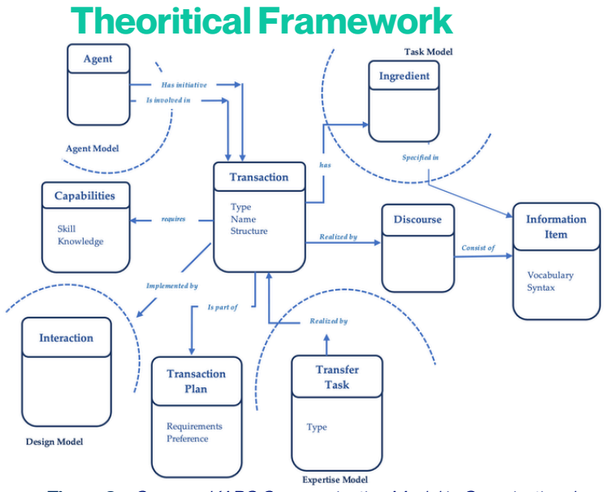

Figure 2. *CommonKADS Communication Model in Organizational Context [7], [8]*

- The CommonKADS Communication Model explains how knowledge is exchanged within an organization through structured interactions between actors.
- It focuses on four core components: **Agent, Transaction Plans, Information Items, Discource, Task, Capabilities, Expertise, and Interaction.**
- The model helps analyze whether communication processes support coordination and collaboration effectively within complex organizational settings.

Analysis Steps

1 Exploratory Factor Analysis
- Multistage Random Sampling
- Questionnaire

2 Structural Equation Model

3 Network Analysis
- Snowball Sampling
- Questionnaire

Figure 3. *Three Stages of Communication Model Development*

Materials

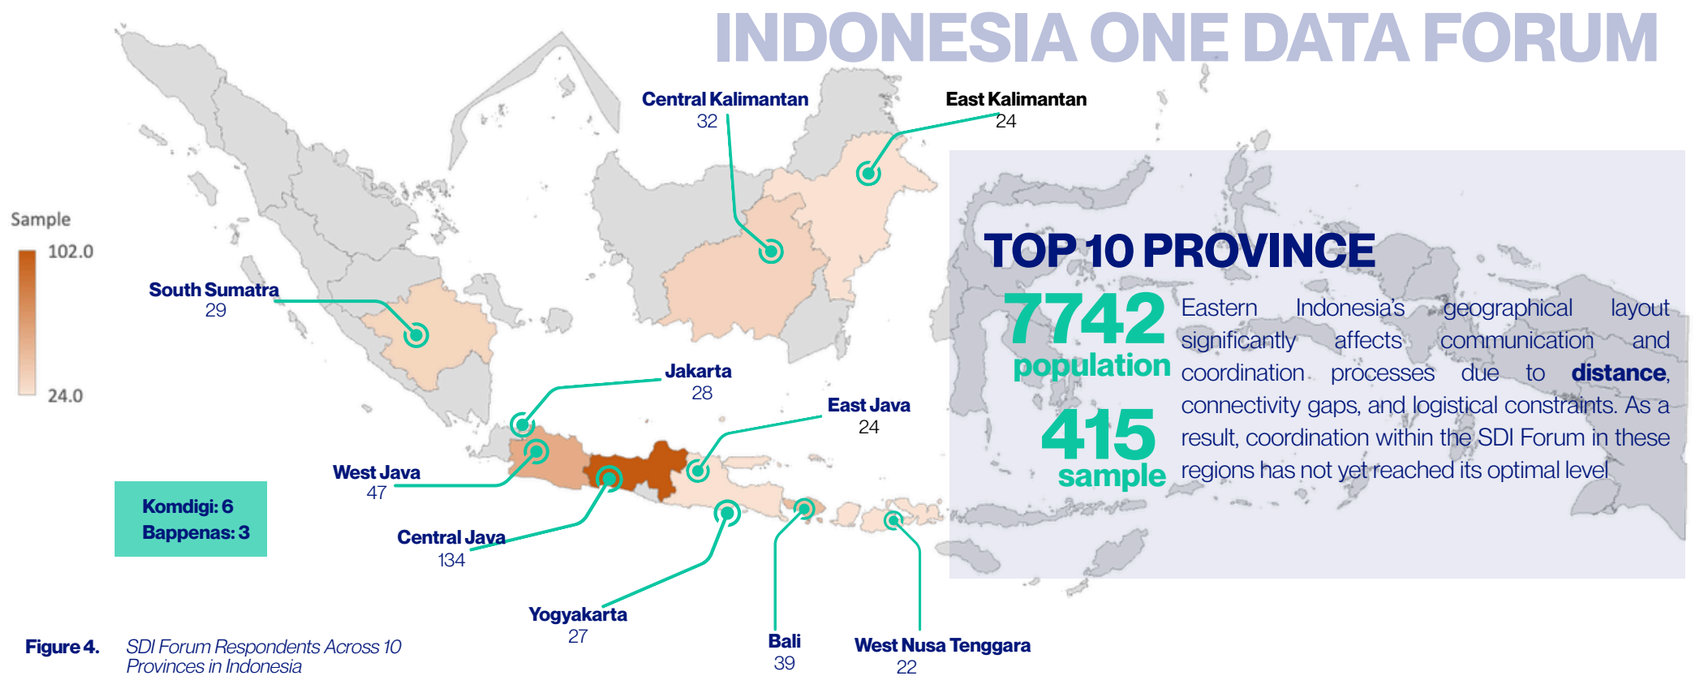

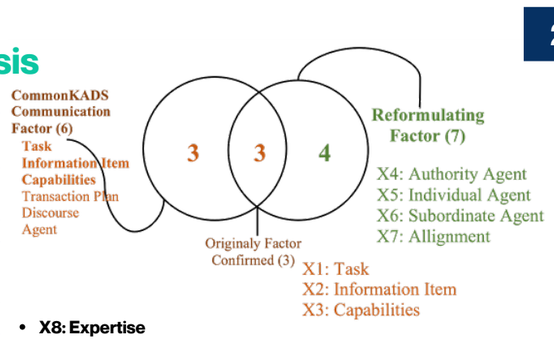

Figure 4. *SDI Forum Respondents Across 10 Provinces in Indonesia*

RESULTS

1 Exploratory Factor Analysis

Exploratory factor analysis identified 7 communication factors: three original factors and four derived factors. The derived factors include one combined factor Discourse & Transaction Plan (alignment) and three agent-based factors (authority, individual, and subordinated agents).

- **X8: Expertise**

Figure 5. *Result of the Exploratory Factor Analysis: 7 Reformulated Factors in Indonesia One Data Forum Context*

These factors were further tested using structural equation modeling to assess their effects on sectoral ego and organizational performance.

2 SEM Analysis

Table 2. *The Effects of Communication Factors on Sectoral Ego and Organizational Performance*

Factor Direction	Effect (%)
Cap. →SE	(-)13,9
Cap. →OP	32
Expert. →OP	19,9
AuthoAg.→SE	(-)22,4
AuthoAg →OP	25,3
SubordAg. →SE	(+)10,6
Alignment →OP	18,5
SE→OP	(-)14,6

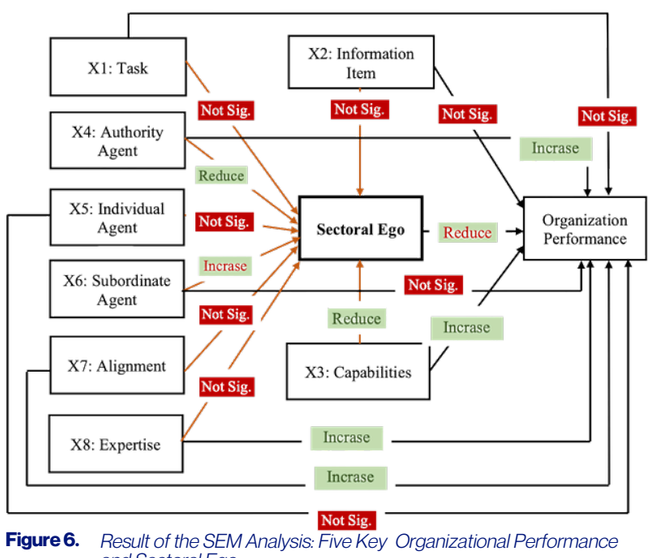

Figure 6. *Result of the SEM Analysis: Five Key Organizational Performance and Sectoral Ego*

3 Network Analysis

Table 1. *Clasification of the Actor in Indonesia One Data Forum Communication Network*

Forum SDI	Closeness	Betweenness	Authority
Central Java	J319	JP7	J331, JP7
Yogyakarta	Y212	Y212	YP21, Y212
Bali	B139	B139	B139
Jakarta	IP1	IP1	IP1
West Java	W2015	W2015	W262
West Nusa Tenggara	N76	N414	N76
South Sumatera	SP1	SP1	SP2
East Kalimantan	M525	M76	M52
Central Kalimantan	K67	K67	K67
East Java	TP1	TP1	TP1

Communication network analysis was conducted in 10 provinces with 78 respondents. Influential actors were identified based on betweenness (information brokers), closeness (efficient information access), and authority (legitimate coordination roles), Detailed in **Table 1.**
Overall, the central actor across the network is the Ministry of Development Planning (Bappenas), representing the core coordinating institution of the SDI Forum.

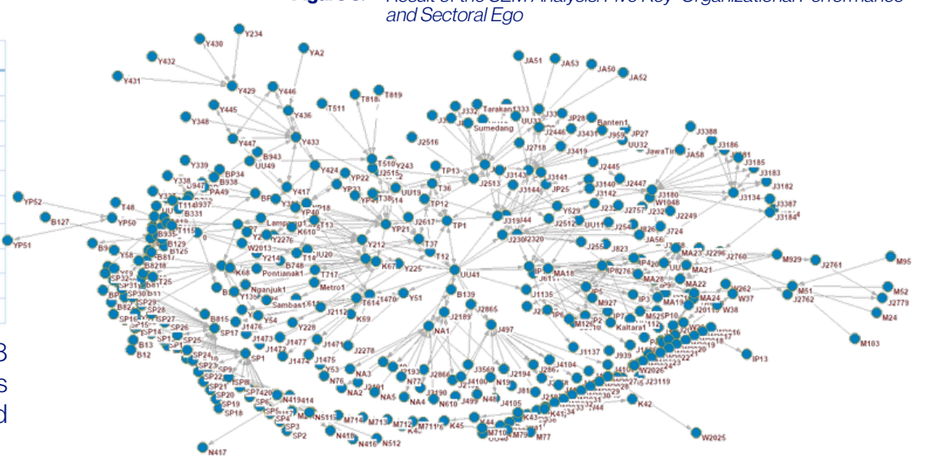

Figure 7. *Result of the SEM Analysis: Five Key Communication Factors Affecting Organizational Performance and Sectoral Ego*

CONCLUSION & CONTRIBUTION

Conclusion

CommonKADS framework **can guide** the development of a communication model for the SDI Forum in addressing sectoral ego, provided it is adapted to contextual conditions. This study **shows:**

1. **Authority Agents** reduce sectoral ego and improve performance, while **Subordinated Agents** tend to reinforce sectoral ego.
2. **Expertise** and **Alignment** enhance organizational performance but do not directly reduce sectoral ego.
3. **Capabilities** are the most influential factor, simultaneously reducing sectoral ego and improving performance.

Contribution

- **Practical:** Provides empirical evidence to improve communication and coordination in the SDI Forum to reduce sectoral ego.
- **Theoretical:** Extends the CommonKADS communication model by incorporating contextual and power-related factors in public data governance.
- **Methodological:** Integrates communication network analysis, factor analysis, and PLS-SEM in one analytical framework.
